

PAWEŁ SZYMASZEK

Since November 2016 I discovered fascinating world of programming, and set a goal - become software developer. From that moment I spend every free time learning and perfecting Java, Spring and Angular Framework. I'm exact, organized person, highly motivated to change my career. Currently I am working at regional blood center as a specialist of manufacturing blood components. At my position, skills like analytical mind and attention to details are most wanted. Working under pressure and focusing on important cases are my everyday routine. As a team member I'm convinced that best way to achieve new skills is common work. Thus I wish to get a chance to change a lab coat to desk with keyboard.

EXPERIENCE

Regional Blood Donation and Transfusion Medicine Center, Kraków

April 2013 – Currently
